

EXPERIMENT 5:

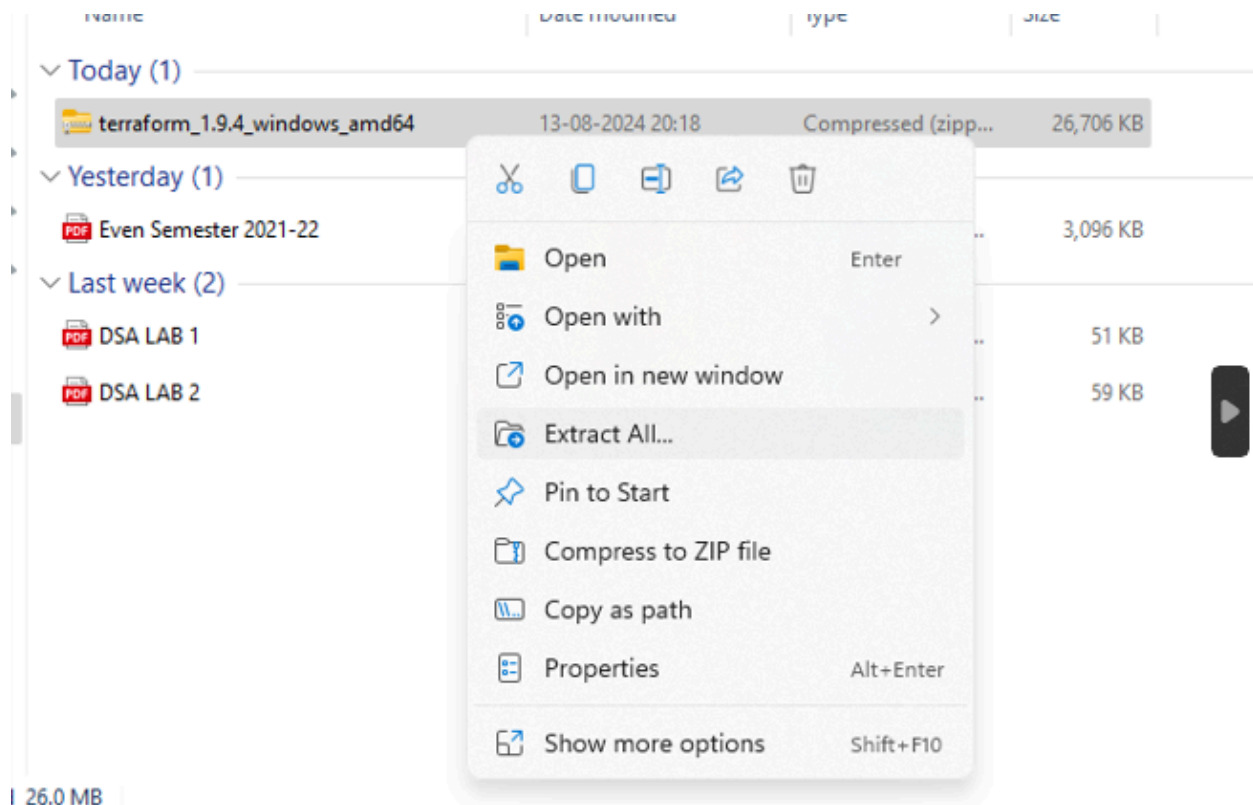

Aim: To understand terraform lifecycle, core concepts/terminologies and install it on a Linux Machine.

STEP 1: To install terraform first download the Terraform Cli Utility for Windows from terraform official website .

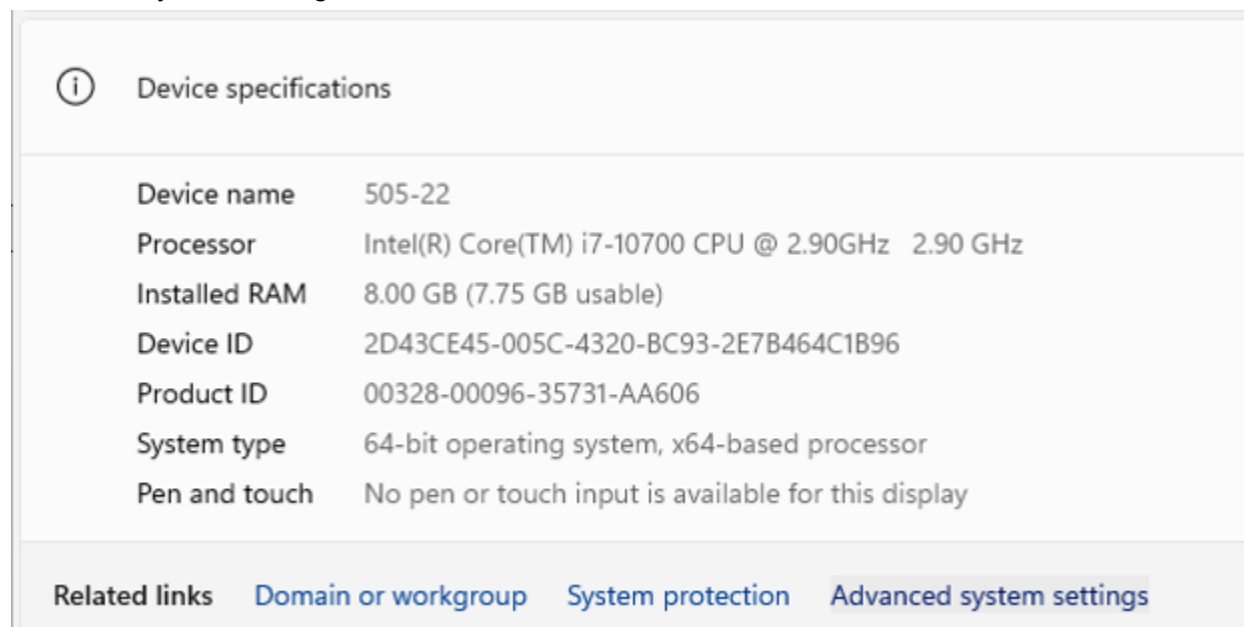

website: www.terraform.io/downloads.html

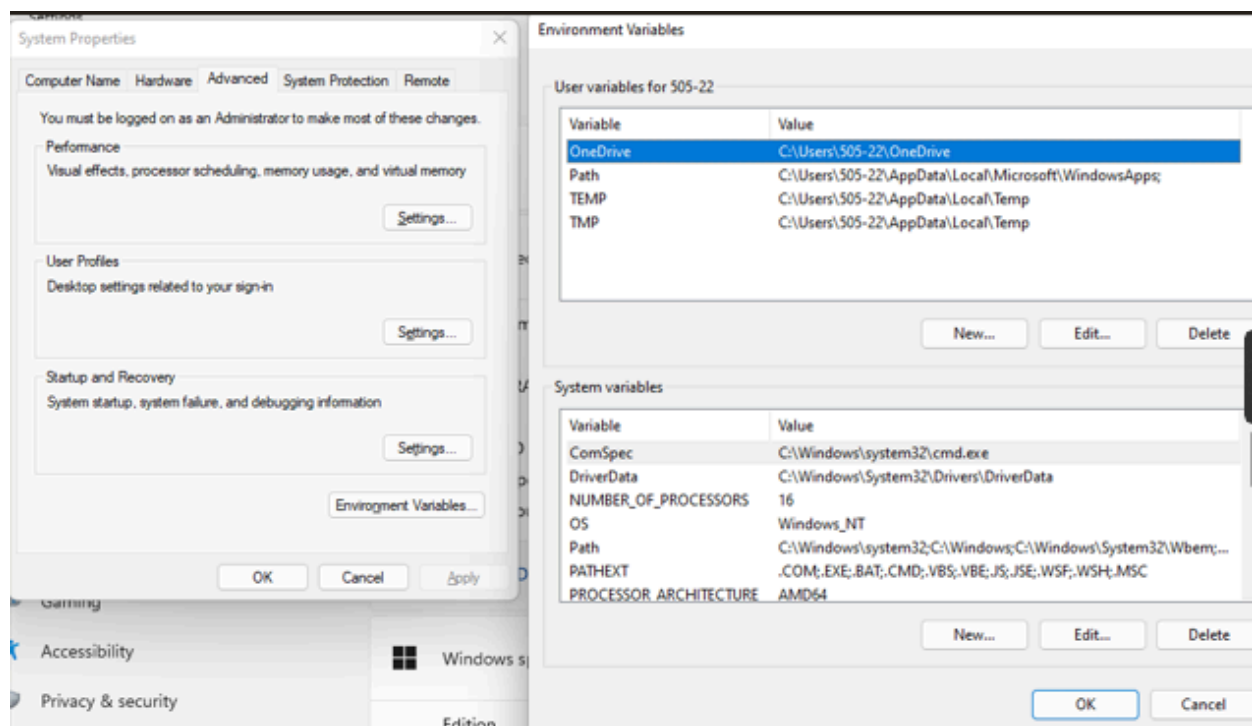

STEP 2: After the zip file is downloaded we will right click on it and click on extract all files.

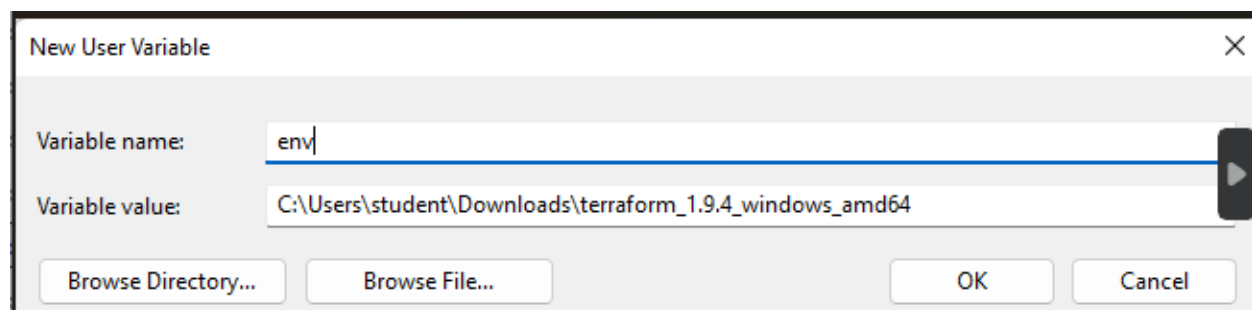

STEP 3: We will go on settings and in settings we will go on about us and then we will on advanced system settings.

STEP 4: After clicking on advanced system settings an interface will get open on which we will click on Environment variable on which we will click on edit .

STEP 5 : After clicking on edit we will enter variable name and the path where terraform folder is.

STEP 6: On command prompt we will write the command `terraform -v` which will give us the version of our terraform and successfully the terraform is downloaded.

```
C:\Users\Dell\Downloads\terraform_1.9.4_windows_amd64>terraform -v
Terraform v1.9.4
on windows_amd64
```
